TABLE OF CONTENTS (CONTINUED)

* All tables include figures for districts and counties listed horizontally.

~~** Includes fires that occurred in all zones and were not confined to structures.~~

*** That damage caused in the structure of origin by fires which later became forest fires is shown in this table. Other improvement damage subsequently caused by these fires is shown with the improvement damage caused by fires that started as forest fires.

"FOREWORD"

Forest fire statistics are tabulated by land zones and are set forth here in three zones, namely, Zone I, Zone II, and Zone III.

Zone I is termed Clarke-McNary lands and is so called because of the federal interest in their primary timber and watershed values. The State receives a reimbursement from the Federal Government on a percentage of State expenditures for protection of these lands.

Zone II includes those lands of both primary and secondary timber and watershed values as well as range values and erosion resistant values. Zone II protection was established as state responsibility by legislative action in 1945.

Zone III is a local responsibility area where protection must be furnished by local agencies.

The present protection zones of State responsibility (Zones 1 and 2) were established in 1945 and embrace an area of approximately 24 million acres.
