TABLE OF CONTENTS (CONTINUED)

* All tables include figures for districts and counties listed horizontally.

** Includes fires that occurred in all zones and were not confined to structures.

*** That damage caused in the structure of origin by fires which later became forest fires is shown in this table. Other improvement damage subsequently caused by these fires is shown with the improvement damage caused by fires that started as forest fires.

"FOREWORD"

It is necessary to clarify a few points in regard to the statistics in this summary.

Forest fire statistics are tabulated by land zones and are set forth here in three zones, namely, Zone I, Zone II, and Zone III.

Zone I is termed Clarke-McNary lands and is so called because of the federal interest in their primary timber and watershed values. The state receives a reimbursement from the Federal Government on a percentage of State expenditures for protection of these lands.

Zone II includes those lands of both primary and secondary timber and watershed values as well as range values and erosion resistant values. Zone II protection was established as state responsibility by legislative action in 1945.

Zone III is a local responsibility area where protection must be furnished by local agencies.

A resurvey of timber and watershed lands (Clarke-McNary or Zone I) in California was completed during the year 1945.

The statistics are tabulated according to the recent zoning. The zoning problem is not solved as yet, and changes between zones are inevitable. However, in all probability the total state responsibility area (Zone I plus Zone II) will remain fairly constant.
